

triple 4

Backup solutions tailored to
your environment.

Care 4 Backup

Care 4 Backup is a Triple4 service stream that includes multiple discussion topics from the actual backing up of data for the purposes of recovery, to planning and documenting disaster recovery, and/or implementing and managing a full IT continuity infrastructure

Guidelines

Backup of data is important but there is more

Everyone knows that data needs to be backed up to some location, somehow, but more importantly is the frequent testing of these backup sets and the checking of its integrity. While Triple4 can take ownership of the backup process only, we always advise that we include frequent testing of these backup sets.

Backups are complicated to maintain

Backups are difficult to monitor, maintain and support, let Triple4 manage these for you. Triple4 will check all backups daily, and report any challenges experienced, then engage with the customer to ensure that backups are completed successfully.

Off-site backup storage is required

If your business requires off-site storage of backup media or jobs, Triple4 have solutions that can provide for this.

Not sure what to backup?

If you are unsure, or do not have the skill to determine what should be backed up in your environment. Triple4 assists companies with selecting the correct data to ensure the environment can be effectively recovered.

Have a tight time-line to full operation?

Should you require very low restoration timeframes in the event of a disaster, Triple4 can assist with the development of a full disaster recovery plan, that includes highly available IT continuity solutions achieving recovery within minutes rather than traditional restorations of hours or even days.

Care 4 Backup is always tailored to your business needs and budget

*A complete Managed
Backup solution for small
requirements and large
enterprise requirement.*

A shift into
a new dimension
for IT solutions.

Lets explore how Triple4 can assist:

Scenario A - Backup

You have a backup infrastructure, but its dated and not very effective; additionally you just don't have the time or capacity to have to worry about it. Triple4 can update and fine tune your existing backup technologies, either with a Cloud backup or by reusing what you have, and managing, and monitoring it for you on-going.

Scenario B - Integrity Tested

You recognise that your backups are only as good as the last successful restore test. As a highly recommended option, Triple4 can schedule test restoration that in conjunction with you, are verified as fully working backup sets that can be relied on in the event of data loss/corruption or other compromises.

Scenario C - IT Continuity

In conjunction with Triple4's Care 4 Network and Care 4 Services, we can develop a high-availability infrastructure that combines all of our service streams into a complete end-to-end IT Continuity solution; encompassing automatic failovers and managed failbacks; for when backup restore times of hours are just not good enough.
