

triple 4

IT solutions tailored
to your environment.

Care 4 Network

Care 4 Network is a end-to-end management and service solution stream that takes control of your network at every layer. From the local area user networks in your offices, right through to your wide area VPN's, storage networks and Internet and Cloud connections.

Guidelines

Unlock your network's potential

Our end-to-end service includes even your Wide Area Networks, over our Software Defined services. You get to experience a network delivered by a Service orientated organisation, rather than a TelCo who only supports up to your internal network. The objective is to have optimised, efficient connectivity to where it matters, at all times.

Know your network

Eliminate bottle necks and avoid overload on network devices with our smart monitoring set-ups that extract data from the devices to help with streamlining, capacity planning and network redesign allowing for sustainable workload and future growth.

Multi layer support

Our technical team provides expertise to monitor, maintain and support almost any setup and can assist with configurations for switching, routing and firewall policies supporting VLAN's, VPN's, routing and WAN set-ups.

Secure your business

We consult on installations of firewalls, set-ups of guest networks, reconfiguring security on devices to allow only specified access and setting up of VLAN's, all of which ensure your business has maximum protection and often, better performance.

Support strategy

Most businesses often have only a basic monitoring and maintenance strategy, which usually leaves many critical areas overlooked and causes downtime that could have been prevented if a proper solution was in place. Care 4 Network offers a comprehensive support solution to cover all areas and report accurately, supporting business critical operations.

Providing management and support of local, wide , global and wireless areas Networks as well as perimeter security.

Service level agreement

Engagements include a service level agreement which provides customers with guaranteed response times and resolution times, giving our customers peace of mind that things are being dealt with professionally and swiftly.

Reporting

Due to the nature of our support approach, most of the remote "unseen" work performed is relayed to clients in the form of comprehensive reports on a monthly basis as well as custom reports, an almost infinite combination of specific areas can be generated.

Capacity planning

Whether you are looking at switching, wireless networking or space on a SAN or NAS device, Triple4 is able to offer effective capacity planning and strategic advice for your network architecture. We can help improve efficiency and assist with end-to-end network design.

Vulnerability Assessments

Triple4 provide on-going and initial vulnerability assessments that ensure no path along your network is open to compromise and disruptive attack. Triple4 uses best-of-breed technology to do this, and is vendor agnostic in this regard.

Network Appliance Monitoring

We offer monitoring and management for a broad base of vendors. Storage devices and appliances can also be monitored and supported. Critical areas such as hardware performance, disk usage and error reporting can be configured and reported on.

Wireless networks

From simple AP deployments to complex multi device, multi network WDS set-ups. Triple4 is able to monitor and support this widely used technology across multiple vendors and platforms. Best practices, guest networks, security and distribution are a few of the areas we specialise in.
